Canary Wharf, London
E14 5JP

Dear Sir/Madam,

My name is Adora Oluabey, I am currently studying Computer Science Bsc at the University of Leicester. I am writing to you in regards to my interest in participating in the Spring Insight Week into Tech at JP Morgan.

My desire to solve problems created a gateway to my passion for Computer Science. This desire is reflected through the idea that technology is often found to be the solution to many global challenges. One of the many ways this is seen is through the way in which technology has made an impact in a range of industries. In finance technology has an effect upon the entirety of its infrastructure. We can see the impact of technology in both the consumer and employees. An example of this is how latest progressions in quantum computing can be used to increase banking security by strengthening its encryption.

My interest in JP Morgan stems from its values. JP Morgan aims to create a positive change for diverse communities. Through this Spring Week they highlight that they are particularly keen to receive applications from underrepresented groups. A lack of opportunities is a typical reason as to why many of these underrepresented groups don't venture into the technological industry. As an individual whose passions stem from providing a solution to problems, the opportunity to learn from a company that has taken such steps to address a large issue in the industry is an opportunity I would be honoured to have.

Thank you for your consideration.

Sincerely,

Adora Oluabey
